MONTHLY WEATHER MAP

APRIL 1961

JUN 14 1961
WEATHER BUREAU

General Summary of Weather Conditions

April 1961 was cool and stormy throughout most of southern Canada. In northern Canada the west was cold and snowy while the east was comparatively dry and warm. A deep cyclonic vortex persisted over the western Arctic islands during the month resulting in frequent cold outbreaks in Mackenzie District, while inflows of milder air kept the eastern Arctic and northern Quebec unusually warm. The outbreaks of cold air frequently pushed down across the Prairie Provinces into the United States, bringing cold weather to the Prairies and stormy weather to the Great Lakes area. As part of the same general pattern storms moved up the Atlantic coast over the Atlantic Provinces at frequent intervals throughout the month.

In the southern sections of British Columbia mean April temperatures were not far from normal, except for deficiencies of one or two degrees in the Chilliwack area and the Kootenay Valley. Conditions were more varied in the extreme northern part of the province where Stewart reported a four degree temperature excess, while there were deficiencies of three or four degrees in the British Columbia part of the Peace River Valley. Three stations in the province, Ashcroft, Oliver and Kitimat reported a high for April of 75 which was the highest temperature anywhere in Canada.

The distribution of precipitation was extremely irregular over the province of British Columbia during April with excesses and deficiencies equally common throughout the province. The heaviest rainfall in the province and in the entire country for the month was 14.08 inches reported by a station in Prince Rupert. It was a dull month in the urban areas of the province with Victoria reporting the fourth dullest April in 48 years of sunshine records and Vancouver the least sunshine in April in the last 15 years.

Outbreaks of cold air swept southward across the Prairie Provinces frequently during April, occurring on the 4th, 9th, 13th, 18th and 25th. By contrast the first and last few days of the month were mild. Mean temperatures averaged two to five degrees below normal throughout the three provinces.

On most occasions the outbreaks of Arctic air were accompanied by snow in at least some parts of the Prairie Provinces. Particularly heavy storms occurred on two occasions, of which the first was on the night of April 18th and 19th, when Calgary reported nearly a foot of snow as a storm moved eastward across southern Alberta. A week later, on April 25th, a storm developed in southwestern Manitoba and resulted in a fall of one and a half feet of snow at Brandon. Strong winds piled the snow into waist high drifts, power was disrupted and many roads were blocked. Total precipitation for the month was less than half normal in most parts of Alberta with smaller deficiencies in the Peace River District and a few excesses in the foothills region around Calgary. Precipitation in the province of Saskatchewan ranged to two or three times normal in the western half of the grain areas but there were deficiencies averaging about forty per cent in the eastern half. In Manitoba there were a few stations reporting deficiencies along the United States boundary but elsewhere in the province there were excesses, with stations in the Brandon-Neepawa area receiving two or three times the normal fall for the month.

Spring was late starting throughout Ontario this April. The month began with a snowcover over almost the entire province, and below zero temperatures in the far northwest corner, where they persisted until the 13th of the month. The major storm tracks passed farther south than is usual at this time of year bringing cool and rather stormy weather to most of the southern and central parts of Ontario. Mean temperatures for the month were two to four degrees below normal in southwestern Ontario, and one to two degrees below normal in southeastern Ontario, while in the northern districts there were excesses of which the greatest was six degrees at Moosonee.

An unusual feature of the month in southern Ontario was the comparatively large amount of snow. Windsor reported six times the normal fall while other cities in the area had two to four times normal. Rainfall was also high in the southwestern part of the province with many stations along Lake Erie and in the Windsor area reporting five or six inches of rain while Port Stanley had a total of 9.3 inches, the highest in eastern Canada during the month. Precipitation was over twice normal in southwestern Ontario while in the remainder of southern Ontario there were excesses averaging about fifty per cent. By contrast most stations in Northern Ontario had deficiencies ranging to seventy per cent although there were excesses of thirty to ninety per cent in the western districts of Rainy River, Kenora and Patricia.

April mean temperatures were above normal throughout most of the province of Quebec although in the Eastern Townships and the Montreal area they were only about one degree. In the Lake St. John area there were positive anomalies of four to six degrees, while in central and northern Quebec mean temperatures were eight to twelve degrees above normal, the largest temperature excesses anywhere in the country during the month.

Snowfall was unusually abundant in southern Quebec during April. At Quebec City the fall of twenty-one inches was the greatest April snowfall in the last eighteen years. Total precipitation was thirty to eighty per cent above normal in the St. Lawrence River Valley and the lower part of the Ottawa Valley. Precipitation was light in central and northern Quebec, deficiencies ranging to seventy per cent in the Lake St. John area and averaging eighty per cent in the central interior and far northern parts of the province.

April was a stormy month in the Maritime Provinces, Halifax, for example, reporting the greatest April wind mileage on record. Tropical air was unable to penetrate northward and storms gave snow right up to the end of the month. As a result spring was backward and monthly mean temperatures were below normal. Negative temperature anomalies for the month were one to three degrees in Nova Scotia, two to four degrees on Prince Edward Island, one to three degrees in central and southern New Brunswick. In the northern section of New Brunswick April mean temperatures were normal to one degree above normal.

Snowfall was unusually heavy throughout the Maritime Provinces. The largest amount was reported from Chatham where a new monthly record amount of fifty-one inches brought the winter season's snowfall to 196 inches, the greatest winter snowfall on record dating back to 1874. Heavy snowfall brought precipitation excesses ranging from ten to ninety per cent to New Brunswick. On Prince Edward Island and in Nova Scotia there were a few scattered stations with small deficiencies, but most reporting points experienced precipitation excesses of ten to forty per cent.

A series of disturbances moved slowly south of the Island of Newfoundland during April, resulting in an almost continuous circulation of easterly and northeasterly winds. As a result the Island was virtually surrounded by ice and for a period ships were unable to enter Newfoundland ports. Mean temperatures for the month were normal to two degrees above normal throughout the Island. The easterly circulation brought snowfall to the Avalon Peninsula where St. John's Airport reported 28.8 inches of snow against a normal of 12.5. In the western and northern parts of the Island on the other hand, snowfall was light. Total precipitation was not far from normal along the southern part of the east coast. Elsewhere on the Island of Newfoundland there were deficiencies which ranged to ninety per cent along the west coast and to fifty per cent along the south coast.

April was mild along the coast of Labrador, all stations reporting excesses of mean temperature which ranged from four to eight degrees. Precipitation was light, deficiencies ranging from thirty per cent at Cape Harrison to ninety per cent at Cartwright.

In the Yukon Territory April mean temperatures were generally within one degree of normal. Precipitation was heavy in the southern part of the Territory, Watson Lake for instance reporting just over two and a half times the normal fall. In the central and northern parts of the Territory there were deficiencies of which the greatest was ninety per cent at Mayo.

The District of Mackenzie was cold during April. Most stations reported negative anomalies of eight to ten degrees while at Inuvik a temperature deficiency of fourteen degrees made it the greatest in the country during the month. By contrast the District of Keewatin and the eastern Arctic Islands experienced above normal mean temperatures. The greatest temperature excess was ten degrees at Nottingham Island.

April precipitation was three or four times normal in the Mackenzie River Valley but elsewhere in the Northwest Territories April precipitation was very irregularly distributed with excesses and deficiencies equally common and no pattern evident.

APRIL 1961

TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:

MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.

The remaining columns give the following information:

PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).

The use of A following the station name indicates that the meteorological observations are taken at Airport offices.

British Columbia
